Mathematics Miseducation: The Case Against a Tired Tradition Derek Stolp

Author and veteran teacher Derek Stolp has come to the conclusion that learning mathematics is of no real consequence for the vast majority of our children. This stance flies in the face of the conventional wisdom held among political leaders, business people, teachers, and parents that mathematics is an essential subject for all children to study well into their high school years. In *Mathematics Miseducation*, Stolp argues that mathematics, as currently taught, does not justify inclusion in the curriculum and he suggests practical changes that can be implemented within a traditional school environment to resuscitate mathematics education.

In this book, the author demonstrates that our beliefs about what children need and what motivates them to learn promote practices that are counterproductive, and that these practices ultimately corrupt students' own healthy motivations. Stolp contends that there is too much emphasis upon academics in our schools, and that other important dimensions of education, such as the social, emotional, and moral development of our children, are ignored.

Includes:

- Progressive and practical alternatives to the traditional methods of teaching
- Research and examples citing ways of bringing the discipline to life

In seamlessly weaving theory and practice, Derek Stolp provides a narrative that is accessible to any adult concerned about what our children are learning in mathematics.
