This collection assembles fourteen new papers on the key topics in Grice's philosophy of language. The contributors include both philosophers and linguists, many of them have been active participants in the various debates concerning Gricean issues.

The volume contains an introduction in Grice's overall project, i.e. his general theory of human rationality, and then devotes its attention to the following topics: Grice's impact on the philosophy of the 20th century; his theory of meaning, especially the distinction between natural and non-natural meaning and its implications for theory of communicative actions; the status of implicatures, presuppositions, negations and intrusive implicatures within his theory of conversation; and finally the semantics-pragmatics distinction which is highly inspired by Grice's work and which has resulted in recent debates concerning minimalist and contextualist semantics.
