Introduction to Partial Differential Equations (Undergraduate Texts in Mathematics) Peter Olver

This textbook is designed for a one year course covering the fundamentals of partial differential equations, geared towards advanced undergraduates and beginning graduate students in mathematics, science, engineering, and elsewhere. The exposition carefully balances solution techniques, mathematical rigor, and significant applications, all illustrated by numerous examples. Extensive exercise sets appear at the end of almost every subsection, and include straightforward computational problems to develop and reinforce new techniques and results, details on theoretical developments and proofs, challenging projects both computational and conceptual, and supplementary material that motivates the student to delve further into the subject.

No previous experience with the subject of partial differential equations or Fourier theory is assumed, the main prerequisites being undergraduate calculus, both one- and multi-variable, ordinary differential equations, and basic linear algebra. While the classical topics of separation of variables, Fourier analysis, boundary value problems, Green's functions, and special functions continue to form the core of an introductory course, the inclusion of nonlinear equations, shock wave dynamics, symmetry and similarity, the Maximum Principle, financial models, dispersion and solitons, Huygens'.

Principle, quantum mechanical systems, and more make this text well attuned to recent developments and trends in this active field of contemporary research. Numerical approximation schemes are an important component of any introductory course, and the text covers the two most basic approaches: finite differences and finite elements.

Peter J. Olver is professor of mathematics at the University of Minnesota. His wide-ranging research interests are centered on the development of symmetry-based methods for differential equations and their manifold applications. He is the author of over 130 papers published in major scientific research journals as well as 4 other books, including the definitive Springer graduate text, *Applications of Lie Groups to Differential Equations*, and another undergraduate text, *Applied Linear Algebra*.

From reader reviews:

Sally McGarvey:

Book is usually written, printed, or created for everything. You can understand everything you want by a e-book. Book has a different type. To be sure that book is important point to bring us around the world. Close to that you can your reading proficiency was fluently. A reserve Introduction to Partial Differential Equations (Undergraduate Texts in Mathematics) will make you to always be smarter. You can feel more confidence if you can know about everything. But some of you think that will open or reading a book make you bored. It is not make you fun. Why they might be thought like that? Have you looking for best book or suitable book with you?

William Sinclair:

Here thing why this specific Introduction to Partial Differential Equations (Undergraduate Texts in Mathematics) are different and trustworthy to be yours. First of all reading a book is good but it depends in the content of computer which is the content is as delightful as food or not. Introduction to Partial Differential Equations (Undergraduate Texts in Mathematics) giving you information deeper including different ways, you can find any publication out there but there is no publication that similar with Introduction to Partial Differential Equations (Undergraduate Texts in Mathematics). It gives you thrill reading through journey, its open up your eyes about the thing this happened in the world which is might be can be happened around you. You can easily bring everywhere like in park your car, café, or even in your method home by train. Should you be having difficulties in bringing the printed book maybe the form of Introduction to Partial Differential Equations (Undergraduate Texts in Mathematics) in e-book can be your alternative.

Sarah McClain:

As we know that book is significant thing to add our information for everything. By a reserve we can know everything we really wish for. A book is a group of written, printed, illustrated or blank sheet. Every year was exactly added. This publication Introduction to Partial Differential Equations (Undergraduate Texts in Mathematics) was filled concerning science. Spend your time to add your knowledge about your technology competence. Some people has distinct feel when they reading a book. If you know how big good thing about a book, you can really feel enjoy to read a reserve. In the modern era like now, many ways to get book that you simply wanted.

Brooks Davis:

Reading a e-book make you to get more knowledge from it. You can take knowledge and information from your book. Book is composed or printed or illustrated from each source that will filled update of news. With this modern era like today, many ways to get information are available for you actually. From media social similar to newspaper, magazines, science publication, encyclopedia, reference book, new and comic. You

can add your knowledge by that book. Ready to spend your spare time to spread out your book? Or just seeking the Introduction to Partial Differential Equations (Undergraduate Texts in Mathematics) when you necessary it?
