Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE: Developing Cyber-Physical Systems (The MK/OMG Press)

Bran Selic, Sébastien Gérard

Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE: Developing Cyber-Physical Systems (The MK/OMG Press)

Bran Selic, Sébastien Gérard

Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE: Developing Cyber-Physical Systems (The MK/OMG Press) Bran Selic, Sébastien Gérard

Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE explains how to apply the complex MARTE standard in practical situations. This approachable reference provides a handy user guide, illustrating with numerous examples how you can use MARTE to design and develop real-time and embedded systems and software.

Expert co-authors Bran Selic and Sébastien Gérard lead the team that drafted and maintain the standard and give you the tools you need apply MARTE to overcome the limitations of cyber-physical systems. The functional sophistication required of modern cyber-physical systems has reached a point where traditional code-centric development methods are proving less and less capable of delivering a reliable product in a timely manner. In *Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE*, you will learn how to take advantage of modern model-based engineering methods and corresponding industry standards to overcome these limitations. These methods take full advantage of computer-supported automation allowing timely detection of design flaws to reduce engineering risk, leading thereby to better overall product quality and greater productivity.

- Understand the design rationale behind the MARTE standard needed to take full advantage of its many powerful modeling capabilities
- Best apply the various MARTE features for the most common use cases encountered in the design of real-time and embedded software
- Learn how MARTE can be used together with the SysML language for the design of complex cyber-physical systems
- Discover how MARTE can be used for different kinds of computer-supported engineering analyses to predict key system characteristics early in development
- Customize MARTE for a specific domain or project

From reader reviews:

Pamela Adair:

In this 21st millennium, people become competitive in every single way. By being competitive now, people have do something to make these people survives, being in the middle of typically the crowded place and notice by surrounding. One thing that oftentimes many people have underestimated this for a while is reading. Yes, by reading a guide your ability to survive enhance then having chance to stay than other is high. For you personally who want to start reading any book, we give you this particular Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE: Developing Cyber-Physical Systems (The MK/OMG Press) book as beginning and daily reading book. Why, because this book is usually more than just a book.

Merry Springs:

A lot of people always spent their particular free time to vacation or maybe go to the outside with them household or their friend. Were you aware? Many a lot of people spent they free time just watching TV, or perhaps playing video games all day long. If you need to try to find a new activity here is look different you can read the book. It is really fun to suit your needs. If you enjoy the book that you read you can spent the entire day to reading a e-book. The book Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE: Developing Cyber-Physical Systems (The MK/OMG Press) it is extremely good to read. There are a lot of people that recommended this book. These were enjoying reading this book. Should you did not have enough space to deliver this book you can buy typically the e-book. You can m0ore very easily to read this book through your smart phone. The price is not very costly but this book offers high quality.

Molly Salazar:

Would you one of the book lovers? If so, do you ever feeling doubt while you are in the book store? Try and pick one book that you find out the inside because don't ascertain book by its cover may doesn't work this is difficult job because you are frightened that the inside maybe not since fantastic as in the outside appear likes. Maybe you answer can be Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE: Developing Cyber-Physical Systems (The MK/OMG Press) why because the amazing cover that make you consider about the content will not disappoint you. The inside or content will be fantastic as the outside or maybe cover. Your reading sixth sense will directly make suggestions to pick up this book.

Cynthia Kipp:

In this period globalization it is important to someone to find information. The information will make a professional understand the condition of the world. The condition of the world makes the information easier to share. You can find a lot of referrals to get information example: internet, magazine, book, and soon. You can observe that now, a lot of publisher this print many kinds of book. Often the book that recommended for

you is Modeling and Analysis of Real-Time and Embedded Systems with UML and MARTE: Developing Cyber-Physical Systems (The MK/OMG Press) this e-book consist a lot of the information on the condition of this world now. This kind of book was represented how can the world has grown up. The terminology styles that writer use to explain it is easy to understand. Typically the writer made some analysis when he makes this book. This is why this book acceptable all of you.
